#### Citation

RATMELIA, Bella. The emerging area of data services: A case of SMU Libraries. (2022). *13th International CALIBER 2022, India, November 17-19*. 1-28.

Available at: [https://ink.library.smu.edu.sg/library\\_research/204](https://ink.library.smu.edu.sg/library_research/204)

This Conference Paper is brought to you for free and open access by the SMU Libraries at Institutional Knowledge at Singapore Management University. It has been accepted for inclusion in Research Collection Library by an authorized administrator of Institutional Knowledge at Singapore Management University. For more information, please email [cherylds@smu.edu.sg](mailto:cherylds@smu.edu.sg).

# The emerging area of Data Services: A case of SMU Libraries

Bella Ratmelia ([bellar@smu.edu.sg](mailto:bellar@smu.edu.sg))

Data Services Librarian, SMU Libraries

18 November 2022

Kwa Geok Choo Library (Law Library)

Li Ka Shing Library (Main Library)

# About SMU

6 schools

2 colleges

13,000+ students

388 faculty from 26 nationalities

20+ research institutes/centers

# SMU's Expansion

- Creation of new colleges with focus on inter-disciplinary research:
  - College of Graduate Research
  - College of Integrative Studies
- Creation of new programs with emphasis on data skills:
  - MSc in Accounting (Data & Analytics)
  - 2nd Major in Accounting Data & Analytics
  - 2nd Major in Financial Forensics (2020)
  - Bachelor of Science (Computing & Law)

# Questions we get now...

"I have gathered about 1 million articles on topic A and B. Do you have any python code snippets that I can use for a simple text analysis e.g., word count?"

"I need to analyse all news about company X, Y, Z. I found that there are around 25,000+ news in total in Factiva. How do I get retrieve them? I heard you can do this via an API? I am really a rookie and have no experience on this before. I hope you can share some of your experience to help me learn and work on this."

"I noticed <tool> allows you to extract references in the bibliography from PDFs. I have been looking for a tool to do this. Are you aware of anything that does this?"

"I am using UN Comtrade API to retrieve financial data for my research. But I keep having trouble with it. Can you help?"

A quick search on Scopus revealed that there are approximately **442** TDM-related papers by SMU faculty since 2005 to 2021.

The numbers are increasing every year, and this trend is unlikely to subside soon.

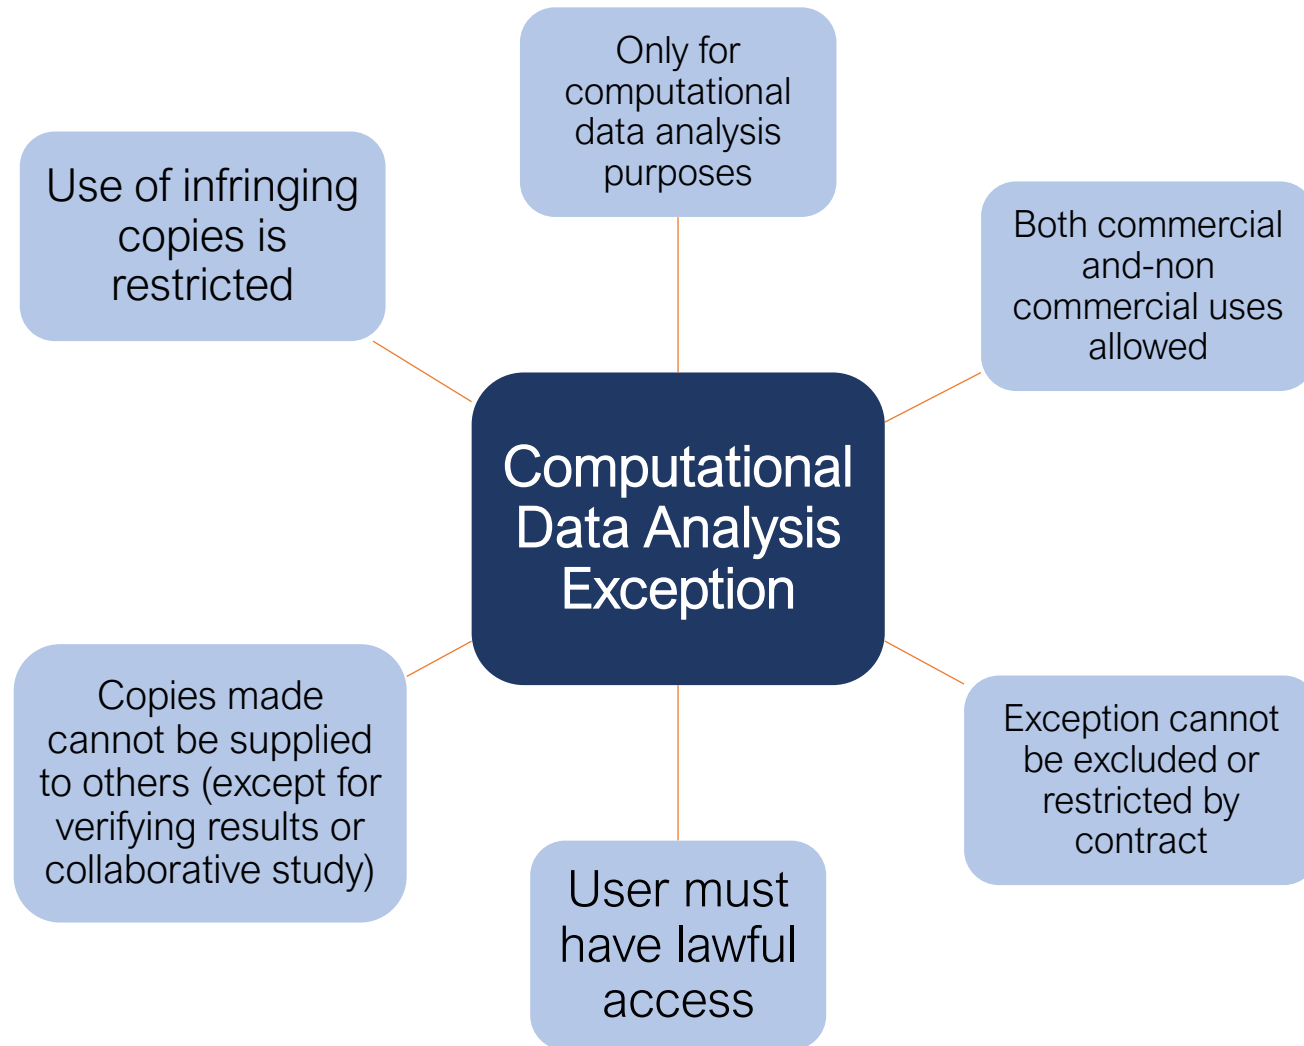

*Number of TDM-related papers by SMU Faculty every year from 2005 to 2021*

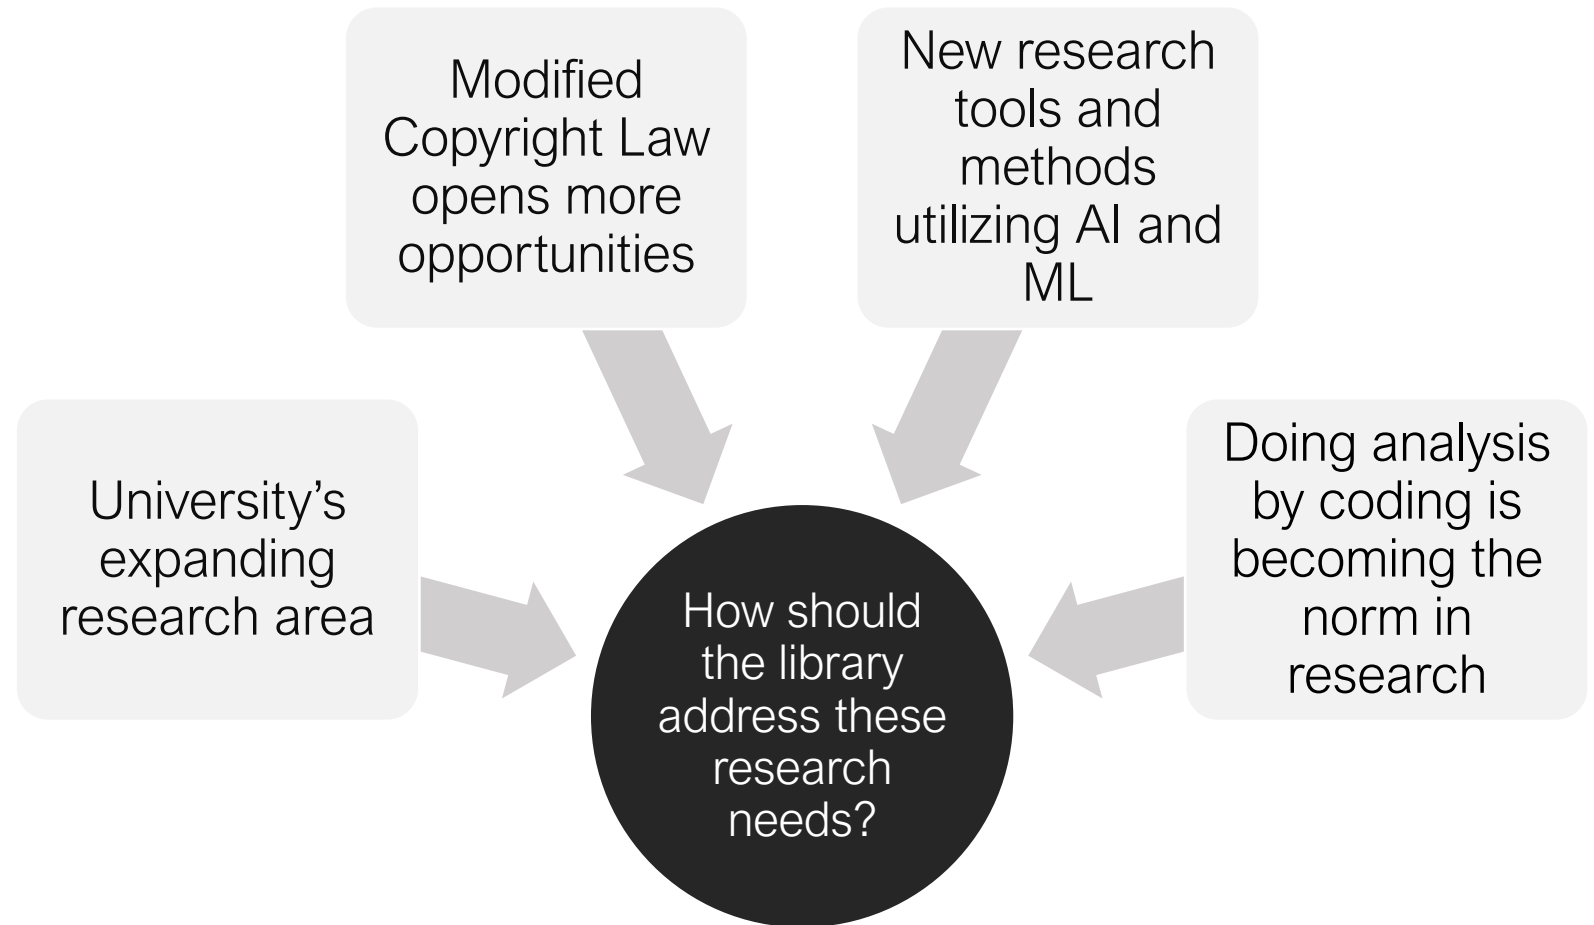

## New Exception in SG Copyright Law:

### Computational Data Analysis Exception (CDA)

- Took effect on November 2021
- Now equipped with advantageous features!

## The issue summarized:

# Our Response

Answers to challenges and changes

# Researcher's Workflow

**Preparation**  
Project mgmt, RQ, funding

**Discovery / Access**  
search, access, ref mgmt., annotate/organize

**Experiment / Analyze**  
Experiment, share, manage, analyze data

**Writing**  
Visualize, write/code, cite, translate

**Publication**  
Archive/share materials, present findings, peer review, select journal, publish

**Outreach**  
researcher profile, promote findings

**Assessment**  
measure impact, assess researcher or team

“Traditional” library services: references, instructions, acquisitions, etc

Scholarly communications services, RDM services

**Data Services**  
New & emerging areas to expand library services

Adapted from *“Innovations in Scholarly Communication”* by Kramer & Bosman

# What exactly is “Data Services?”

One possible current definition:

*“Services that address the full data lifecycle, including the data management plan, digital curation (selection, preservation, maintenance, and archiving), and metadata creation and conversion.”*

(Tenopir et al., 2012)

# What exactly is “Data Services?”

But we define it as such:

*“a suite of services that support and enable the use of computational methods in research.”*

# Approaches

1

Building the  
human capital

2

Enabling the  
resources (and  
services)

3

Engaging &  
connecting  
users to  
resources

4

Keeping  
abreast with  
latest  
developments

# Building the Human Capital

Get a dedicated librarian to develop and deliver data services

- More investment (new headcount)
- More dedicated time to develop skills and knowledge required
- Easier to scale up services

VS

Train existing staff to develop and deliver data services

- Cheaper as it uses existing headcounts
- Less time to develop skills and knowledge required
- Scaling up services won't be as easy

*Why not both?*

*Get a dedicated librarian and have them train existing staff!*

1

4

# Building the Human Capital

## Dedicated Data Services Librarian

To train existing staff, develop new services and expand existing ones, etc.

## Library Carpentry for Library Staff

2 days workshop on Python, OpenRefine, and Tidy Data.

## Bi-monthly RDS Session

1 hour discussion on topics in research e.g., bibliometrics, software citations, data tools, etc.

## Class Audit

Audit relevant classes to keep up with the situation “on the ground”

Keep up with latest developments right from the “source”.

# Enabling the resources and services

From easiest to hardest:

- Creating LibGuides and FAQs based on online resources evaluation (free and paid)
  - Including working with users to do these evaluations
- Providing relevant workshops
- Providing the physical space/resources
- Outreach and promotion

# List of APIs for Scholarly Resources

A list of commonly used scholarly resources API

Home

[Introduction](#)

[FAQs](#)

[Check out other useful guides below](#)

Scholarly Metadata API

Elsevier API (ScienceDirect & Scopus)

Web of Science API

Other Data APIs

Social Media APIs

## Data Services Librarian

## Introduction

### What is an API?

**API** stands for **Application Programming Interface**. Essentially, it's a standardized method that enables online software/services to communicate with each other by way of exchanging data. APIs are used in many different ways such as adding new data on a website through another (e.g. automatically tweet a new blog post), retrieve data from publicly open data repositories, or update contents that resides in another website.

In research and academia, however, data retrieval is the most common usage of API. Generally, you will need some knowledge on programming (e.g. R or Python) to use API.

### What is this API guide about?

This research guide lists some of the well-known and often-used APIs in research and academia. Simply use the tabs on the left to browse the list.

### Questions or Feedback?

If you have any feedback, questions, or know of other APIs that you think should be included in this list, email us at [library@smu.edu.sg](mailto:library@smu.edu.sg).

## FAQs

[How do I find or search within the 50 Journals used in the FT Research Rank \(FT50 Journals\)?](#)

# Analysis and Visualization Tools

Learn how to do your research faster and better!

Introduction

1. Preparation

2. Discovery

**3. Analysis and Visualization**

[Activities in this Phase](#)

[Data Wrangling Tools](#)

[Statistical Analysis Tools](#)

[Text Analysis Tools](#)

[Bibliometric Analysis Tools](#)

[Business Intelligence Tools](#)

4. Writing

5. Publication

6. Outreach

7. Assessment

## 3. Analysis

Common research activities in this phase include **data collection** (through existing datasets, first-hand collection, or experiments), **data analysis**, and **documenting/maintaining the protocols or instruments** used in the analysis.

### Data Wrangling Tools

#### Tools with no coding required (point-and-click)

- [OpenRefine](#)  
OpenRefine is an open source application used for data wrangling (data cleaning, data transformation, data parsing, etc.). You can also use the application to fetch additional data from API endpoints such as Crossref API and many others.
- [Power Query](#)  
Power Query is a tool for data preparation that is integrated by default in Excel (Office 365 or Excel 2016) or Power BI. It enables you to connect to external data sources such as API or Sharepoint sites, and combine, reshape, and manipulate the data. [Official documentation of Power Query](#)

#### Tools with coding required

- [RStudio](#)  
RStudio is an open-source integrated development environment (IDE) for R. It comes with debugging tools, syntax highlighters, and other features that makes working with R easier and more manageable. [Download and installation instruction here.](#)

3

## Workshops on Python, R, and other useful research data tools

- Python workshops consistently in top 5 most popular workshops.
  - ~180 attendees is the highest number so far
- Average attendance of ~50 people per session
- Workshops on literature reviews, text and data mining tools also very popular

### WORKSHOPS

#### 2022 January-February workshops

- [Simple Text Visualisation with Voyant Tool](#). Learn how to do simple text analysis and visualization using Voyant, a light weight and free open source tool.
- [Useful Browser extensions for academic research](#). Aaron Tay, Lead Data Services share some of his favourite Chrome browser extensions for research such as scite, LibKey Nomad, and more.
- [Managing large number of references efficiently](#). Learn the different ways to efficiently export large number of references from sources like Google Scholar or from reference sections of PDF and Word documents. No full text available? Learn how to use tools that leverage citation indexes to extract references and citations from a set of papers of interest.
- [Python 101 Part 1: The Basics](#). This session covers the fundamentals for novice coders, including arithmetic operation, variables, data types, list, For loops, and conditional statements (if-else)
- [Python 101 Part 2: Tinkering with Data Interchange Format](#). This session covers the concept of Python libraries, basic concepts on Panda's DataFrame, JSON, and XML.
- [Python 101 Part 3: Tinkering with Scopus API](#). This session covers basic concept of API and a beginner walkthrough on how to retrieve Scopus search result using the API.
- [Introduction to Version Control Using GitHub Desktop](#). Covers the basic concepts of version control, demonstrated using GitHub Desktop (beginner friendly!)
- [Going beyond Google Scholar, Scite, Overton and new discovery indexes](#). Learn about how Google Scholar compares to scite, a new SMU Libraries' subscription search engine that allows searching via citation statements as well as filtering citations by citation type ("mentioning", "supporting", "constrasting")

2

3

# WHAT IS VOYANT TOOL

- Popular Open Source tool (2014) particularly in digital humanities (see [list of papers](#))
- "Web-based text reading and analysis environment."
  - Web based server available OR
  - Run locally
- More tools at Text Analysis Portal for Research ( [TAPoR](#) ), Hint for survey

Question 0: How to set up WRDS Python API

Step 0: Setup using WRDS Python API

- Complete setup before running this notebook
- Run notebook with script 'pip install wrds'
- Run complete "Successfully installed mock-4.0.3 pycyopg2-binary-2.9.1 wrds-3.1.2"

generated throughout a research project. Which ones can be considered as research data?

- A survey responses 17%
- B raw data recorded in Excel 19%
- C analysis output from SPSS 14%
- D images/photos/videos 13%
- E experimental procedures recorded in lab notebook 11%
- F source codes for a software 10%
- G interview transcripts 16%

25 Responses

## About this notebook

This notebook is created by Bella Ratmela ([bella@smu.edu.sg](mailto:bella@smu.edu.sg)) for SMU Libraries' Python 101 Part 2 bite-sized workshop on 20 September 2022

```
[*]: !pip install scipy
```

```
[1]: # import the necessary packages
import pandas as pd
import seaborn as sns
from scipy import stats
```

### Section 1: Dataframe 101

- reading from csv
- describe and info
- rename columns
- slicing data
- filtering data, group by

## Physical space (Research Data Services) RDS Studio

*“Provide equitable access to equipment”*

### User needs assessment

- Focus groups and interviews with students and faculty

### Findings & Strategy

- Start small
- Make use of existing resources
- Services > physical resources

2

3

## RDS Data Studio - Provide equitable access to equipment

## Monthly ResearchRadar

- Articles on interesting developments pertaining to research/data in general
- Written by librarians!
- This year, it receives **250** views per article on avg.

### RESEARCHRADAR

OSF vs. RDR – where should I put my data?  
Fri, 10/28/2022 - 12:00

### RESEARCHRADAR

## Other Events and Outreach

Collaboration with schools, alumni, and industry partners to discuss the use of Data Science, AI, and Machine Learning in real world.

- Share industry insights
- Starts conversation
- Connect people

# Key Takeaways

---

It is a relatively new area, so it will take time (and lots of learning!)

---

If you need to prioritize, prioritize building up the human capital

---

Engage deeply with faculty/users! They should be our closest allies

# Thank you!

Questions are welcome

(or contact me at [bellar@smu.edu.sg](mailto:bellar@smu.edu.sg))
